Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
--- CATALTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
---- SIMILARITY: Belongs to the Ser/Thr protein kinase family.

husks, ears, pollen, shoot tips, leaf, root tips, whole seed, embryo. This is a Gateway compatible vector, permitting clone movement to new vector backbones for expression in diversity of the seed so that set is using recombination rather than restriction enzymes. poly(A)+ mRNA was prepared by Invitrogen, and equimolar amounts of RNA from each of the 12 tissue samples were mixed together for selection of mRNA with a 5' cap. After synthesis of CDNA, a normalization step was conducted against the mixture of RNA sources. Tissues prepared: 1. just emerging silks; 2. inner husks from ears of sample #1; 3. 20 dap aleurons; 4. inmature tassels, stages from 1-2 mm to 1-2 cm; 5. 2 mm to 2 cm ears; 6. pollen; 7. 1 cm vegetative shoot tips from 15 day old seedlings; all leaves with an expanded or partially expanded sheath were removed; 8. mature leaf tissue; 9. 0.5 cm long root tips from 15 day old seedlings; 10. 10 dap whole seed; 11. 12 dap endosperm and embryo; 12. 17 dap endosperm and embryo. All of the seedlings; 10. 10 dap whole seed; Arizona clones, high density filters and amplified library can be ordered from the University of Arizona the University of Arizona the University of Arizona (http://www.genome.arizona.edu/orders/)."

leaf, root tips, whole seed, embryo; Vector: pGWV-SPORT
6.1; Site_1: EcoRV; Site_2: Not!; Maize Gene Discovery
Project contracted with Invitrogen to produce a
normalized, full length library in a pSport vector. This
is a Gateway compatible vector, permitting clone movement
to new vector backbones for expression in diverse host
cells using recombination rather than restriction enzymes.
Details of the vector and sequencing primers are available
at ZmDB in the EST library description tables. poly(A)+
mRNA was prepared by Invitrogen, and equimolar amounts of
RNA from each of the 12 tissue samples were mixed together
for selection of mRNA with a 5' cap. After synthesis of
cDNA, a normalization step was conducted against the
mixture of RNA sources. This step effected a 20x reduction in common transcript types. Tissues prepared: 1
just emerging silks; 2. inner husks from ears of sample
#1; 3. 20 dap aleurone; 4. immature tassels, stages from
1-2 mm to 1-2 cm; 5. 2 mm to 2 cm ears; 6. pollen; 7. 1 cm
vegetative shoot tips from 15 day old seedlings; 10. 10 dap whole seed; 11.
12 day endosperm and embryo; 12. 17 dap endosperm and
embryo. All of the sequenced clones in project 3530 will
be archived at the University of Arizona along with the
Unigene clones from the Agaened clones in project 3530 will
sequencing project Clones can be ordered through the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GCGCCGAGAGAAGAGGAGGGAATTAGGGATGGACGGGGCGCCCGGTGCCGGAGTTCAGG 107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                            The invention relates to a rice mitogen-activated protein kinase 5 (MAPKS) polypeptides and the polymucleotides encoding them. The invention also relates to an antibody that specifically binds to a peptide consisting of a C-terminal portion of a MAPKS polypeptide, a transgenic plant transformed by a polymucleotide encoding a MAPKS orthologue where ever expression of the MAPKS orthologue in the plant results in increased tolerance to abiotic stress comparated to a wild-type plant and a method for evaluating a plant for tolerance to abiotic stress comprising for evaluating a plant for tolerance to abiotic stress comprising in MAPKS activity in the plant where the increase in MAPKS activity in the plant where the increase in MAPKS activity in the plant where the increase in MAPKS activity in the plant to abiotic stress. The methods and compositions of the present invention are useful for increasing tolerance to abiotic and biotic stress in plants using MAPKS, where the abiotic tress is drought, temperature or salinity and the biotic stress is from pathogenic bacteria, viruses, nematodes and insects. This sequence represents cDNA encoding the rice MAPKSa polypeptide of the invention.

                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                              ð
                                                                                                                                                                                                                                                                                                                                                                      The invention provides Zea mays signal transduction proteins and encoding nucleotide sequences. The nucleic acids are useful for regulating conclectide sequences. The nucleic acids are useful for regulating corpression of phytohormones, including ethylene, auxins, cytokinins, and gibberellin, to effect developmental changes in plants and provide control of plant response to environmental stresses. They may also be control of plant response to environmental stresses. They may also be control of plant response to environmental stresses. They may also be control of plant response, for detecting mutations in the gene, for monitoring upregulation of expression or changes in enzyme activity in screening assays of compounds, for detection of any number of allelic variants, or for site-directed mutagenesis in eukaryotic cells. They may further be used for recombinant expression of their encoded polypeptides, as immunogens in the preparation or screening of antibodies, and in sense contains may be used in assays for enzyme agonists or antagonists, as immunogens or antigens to obtain antibodies specifically immunoractive with the proteins. The present sequence represents a cDNA encoding a signal transduction protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 548

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates a recombinant DNA construct comprising a polymucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The CDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant havense to construct comprising a promoter region
                                                                                                                                                                                                                                                                                                                       CTCTGCAAGTIGIGGCTGCTTTGTATGATATGGTACTATGTTCGAATAAAAGGGTTTG 1054

                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                  The invention relates to a rice mitogen-activated protein kinase 5 (MARKS) polypeptides and the polymucleotides encoding them. The invention also relates to an antibody that specifically binds to a peptide consisting of a C-terminal portion of a MARKS polypeptide, a transgenic plant transformed by a polymucleotide encoding a MARKS orthologue where over expression of the MARKS orthologue in the plant results in increased to clerance to ablotic stress comparated to a wild-type plant and a method for reating a plant for tolerance to ablotic stress comprising treating a plant with ablotic stress, isolating a MARKS portein from the plant, detecting MARKS activity and evaluating the increase or decrease in MARKS activity in the plant where the increase in MARKS activity confident to ablotic stress. The methods and compositions of the present invention are useful for increasing tolerance to ablotic and blotic stress in plants using MARKS, where the ablotic stress is allowed the biotic stress is from pathogenic bacteria, viruses, nematodes and insects. This sequence pathogenic bacteria, viruses, nematodes and insects. This sequence

c functional in a plant cell operably joined to a polynucleotide encoding a polypeptide associated with the property, and growing the transformed collypeptide associated with the property, and growing the transformed collypant coll tolerance. For manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant drought tolerance, for providing increased complex tolerance to plant disease, for improving plant tolerance to hardicides, for increasing the rate of improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic modification of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improved plant growth and development under at least one stress condition. The polynucleotide may also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and compositions are useful in the field of biochemistry and biological characteristics such as increased yield, improved nitrogen flow, increasing plant tolerance to cold or heat, improving plant colerance to extreme osmotic and drought conditions, and improving plant colerance to plant bereding markers, computer-based storage and carrays of molecules, plant breading markers, computer-based storage and carrays of molecules, plant breading markers, computer-based storage and carrays of molecules, plant begenes are some of the 5544 plant collarance to extreme osmotic and experses or pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  analysis systems. The present sequence is one of the 5544 plant cDNA sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in sequence clectronic format directly from USPFO at sequence. The sequence of the patent did sequence. The sequence of the patent did not be sequence. The process of the patent did not be sequence. The process of the patent did not be patent

The nucleic acids are useful for regulating expression of phytohormones, including ethylene, auxins, cytokinins, and gibberellin, to effect developmental changes in plants and provide control of plant response to environmental stresses. They may also be used as probes or amplification primers in the detection, quantitation or isolation of gene transcripts, for detecting mutations in the gene, for monitoring upregulation of expression or changes in enzyme activity in screening assays of compounds, for detection of any number of allelic variants, or for site-directed mutagenesis in eukaryotic cells. They may
                                                                                                                                                                                                                                                                     540

The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme common pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, combination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one strong sease condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert of the
